innovation  you

World leader in innovative lighting solutions

At Philips, we believe in the power of light to transform spaces and improve lives. With over 130 years of expertise in lighting, we have become a global leader in creating innovative, energy-efficient solutions that brighten homes, workplaces, and communities.

From smart lighting that adapts to your needs to outdoor lighting that enhances safety and beauty, our products are designed to create the perfect atmosphere for every moment. Committed to sustainability, we strive to develop lighting solutions that not only illuminate but also reduce energy consumption, making the world a brighter and a more sustainable place for future generations.

Innovating comfort with LED light with fan

Philips is revolutionizing the way we experience lighting by combining it with modern BLDC technology. Our innovative products are designed to not only provide refreshing airflow but also incorporate energy-efficient solutions. With modern designs, these products offer a perfect balance of comfort and decor.

Reverse rotation feature

These models come with a unique feature called reverse rotation, which allows them to rotate in both clockwise and counterclockwise directions. This feature is designed to improve air circulation in summers and winters, both.

How reverse rotation works

Reverse rotation mode is intended to be used in winter for destratification. On switching to the reverse rotation mode, the fan rotates at an optimum speed in the clockwise direction, mixing the hot air above and cold air below to keep the occupant warm in winter.

Dynamic light with a quiet, comfortable breeze

Beamer offers a tunable and dimmable LED light with a peak brightness of 1600 lumens[#], allowing you to adjust the lighting and shade for any setting. You have the option to choose between a decorative mode (with a designer accessory) or a functional mode (without the designer accessory), with the accessory included in the box for easy installation or removal as per your preference.

Dimmability

This feature offers the flexibility to adjust the light intensity, allowing users to create the perfect atmosphere for any room. With 1600 lumens[#] peak brightness, the light provides ample illumination for various activities while also offering the option to dim the light to a softer glow for a more relaxed ambiance. Making it ideal for spaces like bedrooms, living rooms, or study areas.

Tunability

This feature is used to adjust the color temperature of the light. This allows users to shift between warm, natural, or cool lighting, depending on the time of day or desired mood. Whether you need a bright, cool light for focused work or a warm, soothing glow for relaxation, tunable fans help customize the lighting experience, enhancing comfort and functionality in any space.

Twinlight

This model combines elegant design with functionality, featuring unique dual light operation with a focus downlight and ambient ring light, both independently operable with three dimming levels. Its minimalistic design seamlessly integrates the blades into the hub, while the telescopic design ensures easy installation. Powered by BLDC technology, it offers electricity savings with superior performance.

Dimmability

This feature offers the flexibility to adjust the light intensity, allowing users to create the perfect atmosphere for any room. The light provides ample illumination for various activities while also offering the option to dim the light to a softer glow for a more relaxed ambiance. Making it ideal for spaces like bedrooms, living rooms, or study areas.

Dual light operation

It features unique dual light operation, where both the ring and the centre portion emit light, that can be controlled independently. The ambient ring light creates a soft glow for a cozy atmosphere, and the centre downlight provides bright, focused lighting. This innovative design is a great combination of both functionality and style.
